Rush sequence search: 09/391,606

09/391,606 is an amended case due next bi-week and require sequence search. Could you approve the following Rush Sequence Search for 09/391,606? Thanks!

SEQ ID Nos. 1-4, 7-9 and 12-16.

    AAY34584-Y35879 represent the proteins encoded by all the open reading frames in the complete genome (see AAX91990) of Chlamydia pneumoniae. C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Major outer membrane protein; MOMP; Chlamydia; vaccine; immune response; cellular response; immunogen; Thl-like CD4 response; mucosal immunity.

The invention provides a non-replicating vector that comprises, linked to a promoter, a nuclectide sequence that encodes a region containing at least one of the conserved domains 2, 3 and 5 of a major outer membrane protein (MOMP) of a Chlamydia strain. The vector is used: (a) in vaccines to generate a protective immune response (mainly callular) against MOMP, and (b) as immunogens to raise anti-MOMP antibodies, useful in standard immunoassays. Immunization with the vector induces a broad spectrum of immune responses, including Thh-like CD4 responses and mucosal immunity, providing significant protection against subsequent challenge. Sequences AAYS6757-71 represent MOMP sequences from a variety
                                                                     Non-replicating vector encoding fragments of the outer membrane protein of Chlamydia, useful in vaccines and as immunogen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     143
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 181

                                                                                                                                                                                                                                                                           The present sequence is the major outer membrane protein (MOMP) of Chlamydia psittaci strain B577. A claimed MOMP polypeptide (see AAM98184) comprises regions VD3 and VD4 of B577 MOMP, i.e. it lacks regions VD1 and VD2. A claimed vaccine composition includes MOMP polypeptide lacking VD1 and VD2, optionally fused to a maltose binding protein. Also claimed are an isolated nucleic acid encoding the polypeptide, a vector, and a method of preventing C. psittaci infection by administering the vaccine containing the MOMP polypeptide. Vectors encoding MOMP polypeptides lacking regions VD1 and VD2 are useful for genetic vaccination. The vaccines are used to prevent C. psittaci infection, especially in

                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is the major outer membrane protein (MOMP) of Chlämydia psittaci strain 6BC. Claimed MOMP polypeptides (see AAM98183 and AAW98184) comprise regions VD3 and VD4 of an MOMP, i.e. Lakey lack regions VD1 and VD2. Claimed vaccine compositions include such MOMP polypeptides, optionally fused to a maltose binding protein. Also claimed are isolated muclaic acids encoding the polypeptide, a vector, and a method of preventing C. psittaci infection by administering the vaccine containing the MOMP polypeptide a vectors encoding MOMP polypeptides lacking regions volumed volume vaccine containing the vectors encoding work polypeptides acking regions volume volume vaccine vaccine to prevent C. psittaci infection, especially in birds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to new nucleic acid sequences and the proteins encoded by the nucleic acid sequences. The encoded proteins comprise an immunogenic portion of a Chlamydia antigen. The encoded proteins are useful for the serodiagnosis and treatment of Chlamydia proteins are useful for the serodiagnosis and treatment of Chlamydia infection. Chlamidiae are intracellular bacterial pethogens that are responsible for a wide variety of human infections. C. trachomatis infection is one of the most common sexually transmitted diseases and can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    lead to pelvic inflammatory disease (PID), resulting in tubal obstruction and infertility. Trachoma due to ocular infection with C. trachomatis is the leading cause of preventable blindness worldwide. C. pneumonia is a major cause of acute respiratory tract infections in humans and is a laso thought to play a role in the pathogenesis of atherosclerosis and coronary heart disease. The present sequence is a protein isolated in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Isolated polypeptide for diagnosis and treatment of Chlamydia infection comprises immunogenic portion of Chlamydia antigen, which comprises amino acid sequence encoded by polynucleotide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               265
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 62 S-MGAKPT---GSAA-ANYTTAVDRPNPAYNKHLHDAEWFTNAGFIALNIWDRFDVFCTL 116

                                                                                                                                                                                                                                                                                                                                                                                          compounds and methods for the treatment and diagnosis of chlamydial infection. The compounds provided include polypeptides and fusion proteins comprising immunogenic portions of Chlamydia antigens and DNA sequences encoding such polypeptides. They are useful for vaccinating against chlamydial infection, which causes pelvic inflammatory disease, trachoma, acute respiratory tract infections, atherosclerosis and heart disease.

A claimed MOMP polypeptide (see ARW98183) comprises regions VD3 and VD4 of LSUWTCK MOMP, i.e. it lacks regions VD1 and VD2. A claimed vaccine composition includes MOMP

                                                                                                                          useful
                                                                The invention provides a non-replicating vector that comprises, linked to a promoter, a nucleotide sequence that encodes a region containing at least one of the conserved domains 2, 3 and 5 of a major outer membrane protein (MOMP) of a Chlamydia strain. The vector is used: (a) in vectores to generate a protective immune response (mainly cellular) against MOMP, and (b) as immunicanien response (mainly cellular) in standard immunoassays. Immunization with the vector induces a broad superture immune responses, including Thi-like CD4 responses and mucosal immunity, providing significant protection against subsequent challenge. Sequences AAN56757-71 represent MOMP sequences from a variety
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   outer membrane protein; MOMP; Chlamydia; vaccine; immune response; lar response; immunogen; Th1-like CD4 response; mucosal immunity.

to a promoter, a nucleotide sequence that encodes a region containing at least one of the conserved domains 2, 3 and 5 of a major outer membrane protein (MOMP) of a Chlamydia strain. The vector is used (a) in vaccines to generate a protective immune response (mainly cellular) against MOMP, and (b) as immunogens to raise anti-MOMP antibodies, useful in standard immunoassays. Immunization with the vector induces a broad spectrum of immune responses, including Thi-like CD4 responses and mucosal immunity, providing significant protection against subsequent challenge. Sequences AAX56757-71 represent MOMP sequences from a variety
                                                                                                                                                                                                                                                      membrane protein
                                                                                                                                                                                                                                                                                                                                                                              The invention provides a non-replicating vector that comprises, linked

                                                                                                                                                                                                                                AAW76362-W76366 are major outer membrane proteins isolated from Chlamydia trachomatis which are used for the measurement of an antibody against Chlamydia trachomatis, by using it as an antigen in the form of a reagent. The method can give a diagnostic method for Chlamydia trachomatis-infected diseases with high specificity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                            173
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   300

The invention provides a non-replicating vector that comprises, linked to a promoter, a nucleotide sequence that encodes a region containing at least one of the conserved domains 2, 3 and 5 of a major outer membrane protein (MOMP) of a Chlamydia strain. The vector is used: (a) in yaccines to generate a protective immune response (mainly cellular) equalist MOMP, and (b) as Immunogens to raise anti-MOMP and thodales, useful in standard immunoassays. Immunization with the vector induces a broad spectrum of immuno responses, including Th1-like CD4 responses and mucosal immunity, providing significant protection against subsequent challenge. Sequences AAY5675771 represent MOMP sequences from a variety of servars of C. trachomatis.
Major outer membrane protein; MOMP; Chlamydia; vaccine; immune response; èellular response; mucogen; Th1-like CD4 response; mucosal immunity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    outer membrane protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         62 SMGAKPTGSAAANY----TTAVDRPNPAYNKHLHDAEWFTNAGFIALNIWDRFDVFCTLG 117

Non-replicating vector encoding fragments of the outer membrane protein of Chlamydia, useful in vaccines and as immunogen

Disclosure; Fig 10 A-F; 52pp; English.

The invention provides a non-replicating vector that comprises, linked to a promoter, a nucleotide sequence that encodes a region containing at least one of the conserved domains 2, 3 and 5 of a major outer membrane protein (MOMP) of a Chlamydia strain. The vector is used (a) in vaccines to generate a protective immune response (mainly cellular) against MOMP, and (b) as immunogens to raise anti-MOMP antibodies, useful in standard immunoassays. Immunization with the vector induces a broad spectrum of immune responses, including Th1-like CD4 responses and mucosal immunity, providing significant protection against subsequent challenge. Sequences AAY56757-71 represent MOMP sequences from a variety C. trachomatis. serovars of

useful The invention provides a non-replicating vector that comprises, linked to a promoter, a nucleotide sequence that encodes a region containing at least one of the conserved domains 2, 3 and 5 of a major outer membrane protein (MOMP) of a Chlamydia strain. The vector is used: (a) in vaccines to generate a protective immune response (mainly cellular) against MOMP, and (b) as immunogens to raise anti-MOMP antibodies, useful in standard immunoassays. Immunization with the vector induces a broad spectrum of immune responses, including Th1-like CD4 responses and mucosal immunity, providing significant protection against subsequent challenge. Sequences ANYESSS:7-71 represent MOMP sequences from a variety Non-replicating vector encoding fragments of the outer membrane protein of Chlamydia, useful in vaccines and as immunogen outer membrane protein; MOMP; Chlamydia; vaccine; immune respons« Lar response; immunogen; Th1-like CD4 response; mucosal immunity. The invention provides a non-replicating vector that comprises, linked to a promoter, a nucleotide sequence that encodes a region containing at least one of the conserved domains 2, 3 and 5 of a major outer membrane protein (MOMP) of a Chlamydia strain. The vector is used: (a) in vaccines to generate a protective immune response (mainly cellular) against MOMP, and (b) as immunogens to raise anti-MOMP and antibodies, useful in standard immunoassays. Immunization with the vector induces a broad spectrum of immune responses, including Th1-like CD4 responses and challenge. Sequences AAY5675771 represent MOMP sequences from a variety of serovars of C. trachomatis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MOMP; Chlamydia; vaccine; immune response; Th1-like CD4 response; mucosal immunity.

```
'AAW76362-W76366 are major outer membrane proteins isolated from Chlamydia trachomatis which are used for the measurement of an antibody against Chlamydia trachomatis, by using it as an antigen in the form of a reagent. The method can give a diagnostic method for Chlamydia trachomatis-infected diseases with high specificity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 24, Application US/08488351A
Patent No. 584346
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Ladd, Anna
APPLICANT: Ladd, Anna
APPLICANT: Lamb, Timothy
TITLE OF INVENTION: Immunogenic LHRH peptide constructs
TITLE OF INVENTION: and synthetic universal immune stimulators for vaccines
NUMBER OF SEQUENCES: 114
CORRESPONDENCE ADDRESS:
ADDRESSEE: Maria C.H. Lin
STREET: 345 Park Avenue
CITY: New York
                                                                                                                                                                                 immune stimulators for vaccines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Length 37;

 J. Infect. Dis. 181 Suppl 3:S524-S527(2000).

-!- FUNCTION: STRUCTURAL RIGIDITY OF THE OUTER MEMBRANE OF ELEMENTARY BODIES AND PORIN FORMING, PERMITTING DIFFUSION OF SOLUTES THROUGH THE INTRACELLULAR RETICULATE BODY MEMBRANE.

-!- SUBJUNT: DISULFIDE BOND INTERACTIONS WITHIN AND BETWEEN MOMP MOLECULES OTHER COMPONENTS FORM HIGH MOLECULAR-WEIGHT OLIGOMERS.
-!- SUBJURTAL LOCATION: INTEGRAL MEMBRANE PROTEIN. OUTER MEMBRANE.
-!- SIMILARITY: BELONGS TO THE CHLAMYDIAL OMP FAMILY.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 brochitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent ofitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.
 AAY34584-Y35879 represent the proteins encoded by all the open reading frames in the complete genome (see AAX91990) of Chlamydia pneumoniae. C. pneumoniae causes respiratory disease such as pneumonia and

to a promoter, a nucleotide sequence that encodes a region containing at least one of the conserved domains 2, 3 and 5 of a major outer membrane protein (MOMP) of a Chlamydia strain. The vector is used: (a) in vaccines to generate a protective immune response (mainly cellular) against MOMP, and (b) as immunogens to raise anti-MOMP antibodies, useful in standard immunoassays. Immunization with the vector induces a broad spectrum of immune responses, including Th1-like CD4 responses and mucosal immunity, providing significant protection against subsequent challenge. Sequences AAV5675771 represent.MOMP sequences from a variety of serovars of C. trachomatis.
 outer membrane protein
 The invention provides a non-replicating vector that comprises, linked

 The present sequence is the major outer membrane protein (MOMP) of Chlamydia psittaci strain B577. A claimed MOMP polypeptide (see AAM98184) comprises regions VD3 and VD4 of B577 MOMP, i.e. it lacks regions VD1 and VD2. A claimed vaccine composition includes MOMP polypeptide lacking VD1 and VD2, optionally fused to a maltose binding protein. Also claimed are an isolated nucleic acid encoding the polypeptide, a vector, and a method of preventing consistant infection by administering the vaccine containing the MOMP polypeptide. Vectors encoding MOMP polypeptides lacking regions VD1 and VD2 are useful for genetic vaccination. The vaccines are used to prevent C. psittaci infection, especially in

The present sequence is the major outer membrane protein (MOMP) of Chlamydia psittaci strain 6BC. Claimed MOMP polypeptides (see AAM98183 and AAW98184) comprise regions VD3 and VD4 of an MOMP, i.e. they lack regions VD1 and VD2. Claimed vaccine compositions include such MOMP polypeptides, optionally fused to a maltose binding protein. Also claimed are isolated nucleic acids encoding the polypeptide, a vector, and a method of preventing C. psittaci infection by administering the vaccine containing the MOMP polypeptide a vectors encoding MOMP polypeptides lacking regions VD1 and VD2 are useful for genetic vaccination. The vaccines are used to prevent C. psittaci infection, especially in birds.

 The present invention relates to new nucleic acid sequences and the proteins encoded by the nucleic acid sequences. The encoded proteins comprise an immunogenic portion of a Chlamydia antigen. The encoded proteins are useful for the serodiagnosis and treatment of Chlamydia infection. Chlamdiae are intracellular bacterial pathogens that are responsible for a wide variety of human infections. C. trachomatis infection is one of the most common sexually transmitted diseases and can
 lead to pelvic inflammatory disease (PID), resulting in tubal obstruction and infertility. Trachoma due to ocular infection with C. trachomatis is the leading cause of preventable blindness worldwide. C. pneumonia is a major cause of acute respiratory tract infections in humans and is also thought to play a role in the pathogenesis of atherosclerosis and coronary heart disease. The present sequence is a protein isolated in the
 Isolated polypeptide for diagnosis and treatment of Chlamydia infection comprises immunogenic portion of Chlamydia antigen, which comprises amino acid sequence encoded by polynucleotide sequence

Chlamydia polypeptides and fusion proteins useful for preventing pelvic inflammatory disease, trachoma, acute respiratory tract infections, atherosclerosis and heart disease
 Chlamydia; vaccine; infection; fusion protein; antigen; pelvic inflammatory disease; tachoma; atheroscierosis; heart disease; acute respiratory tract infection; Capl; CT529; OWCB; polymorphic membrane protein; pmp; thiol specific antioxidant; TSA.
 The present sequence is provided in a specification relating to compounds and methods for the treatment and diagnosis of chlamydial infection. The compounds provided include polypeptides and fusion proteins comprising immunogenic portions of chlamydia antigens and DNA sequences encoding such polypeptides. They are useful for vaccinating against chlamydial infection, which causes pelvic inflammatory disease, trachoma, acute respiratory tract infections, atherosclerosis and heart disease.

 AAW76362-w76366 are major outer membrane proteins isolated from Chlamydia trachomatis which are used for the measurement of an antibody against Chlamydia trachomatis, by using it as an antigen in the form of a reagent. The method can give a diagnostic method for Chlamydia trachomatis-infected diseases with high specificity.

 The invention provides a non-replicating vector that comprises, linked to a promoter, a nucleotide sequence that encodes a region containing at least one of the conserved domains 2, 3 and 5 of a major outer membrane protein (MOMP) of a Chlamydia strain. The vector is used: (a) in vaccines to generate a protective immune response (mainly cellular) against MOMP, and (b) as immunogens to raise anti-MOMP antibodies, useful in standard immunoassage. Immunisation with the vector induces a broad spectrum of immune responses, including Th1-like CD4 responses and mucosal immunity, providing significant protection against subsequent challenge. Sequences ANYSO(577-71 represent MOMP sequences from a variety

```
AAW76362-W76366 are major outer membrane proteins isolated from Chlamydia trachomatis which are used for the measurement of an antibody against Chlamydia trachomatis, by using it as an antigen in the form of a reagent. The method can give a diagnostic method for Chlamydia trachomatis-infected diseases with high specificity.
 Preparation of major outer membrane protein of Chlamydia trachomatis by cloning and recombinant expression of the gene, for use as a diagnostic of Chlamydia infections
